Problem Solvers with Adhesive Restorative Materials: Crown and Bridge Repair

Nothing lasts forever; Our restorations and patient's teeth wear out. During any given day of a dental practice, we face challenges in repairing and restoring teeth. With our patients keeping their teeth longer, we are seeing some problems develop with the fracture of porcelain-metal crown and bridge restorations. During this presentation you will learn the ins and outs of predictable crown and bridge repair using a variety of techniques.

Dr. Howard Strassler is Professor and Director of Operative Dentistry at the University of Maryland Dental School in the Department of Restorative Dentistry. He has lectured nationally and internationally on techniques and selection of dental materials in clinical use and esthetic restorative dentistry. For the past six years Dr. Strassler has been recognized by Dentistry Today as one of the top 100 speakers for CE programs in the United States. He is a Fellow in the Academy of Dental Materials, a Member of the American Dental Association, Academy of Operative Dentistry and International Association of Dental Research. Dr. Strassler was the Academy of General Dentistry's Year 2000 recipient of the Thaddeus V. Weclaw Honorary Fellowship. This award is given to an individual who has made outstanding contributions to the art and science of dentistry or who has enhanced the principles and ideals of the Academy of General Dentistry. He is on the editorial review board for the Journal of Esthetic and Restorative Dentistry, Compendium of Continuing Dental Education, Contemporary Esthetics and Restorative Practice, Inside Dentistry and Dentistry Today.
